Winfoor joins Ansys startup program

September 4, 2018.

Lund, Sweden – **Winfoor joins the Ansys startup program.**

Winfoor is pleased to announce that the company has been enrolled in the Ansys partner program. The program, which is designed to support startups in their product development, gives Winfoor access to leading software that will be used to simulate and optimize product performance.

“We are very happy to join the program and we expect that having access to the Ansys’ software and support will improve product performance and shorten time to market,” says Rikard Berthilsson, CEO of Winfoor.

About Winfoor

Winfoor is a spin off from the Lund University, Sweden. Behind the company is a multidisciplinary group of researchers from the fields of mathematics, fluid mechanics and structural mechanics. The team is passionate about taking new scientific research results to new and better technologies for the wind power industry, and to accelerate the transition to greater use of renewable energy worldwide.

Winfoor is a forerunner within the field of rotor blade technology. Our flagship product is Triblade, a disruptive technology for large scale wind turbine rotor blades
